Online Courses: Anywhere, Anytime.

Minerva Statistical Consulting offers on-line intensive courses in: Python, C++, Matlab, Excel, Java, R, SQL and VBA, at all levels, including beginner, intermediate and advanced. Data and numerical analysis are also considered, alongside statistical and financial applications.

Our students can benefit from the high degree of instructor-student interaction as well as exposure to real-world case studies and applications. A certificate of completion is normally awarded after the course alongside the option to sit a written examination.

This course was very helpful in developing the foundations of the Python software. Moreover, one of the merits of this courses is that it starts from scratch, allowing everyone to understand the workings and basics of the software.

Manuel Ortiz -Olave (Market Analyst)

The instructor was very knowledgeable with a lot of practical experience from the industry. As opposed to other courses I have taken, he made good choices on the topics to cover. All in all, the course gave me a better understanding of the software Python and its applications.

Paul Wohlfarth (PhD student)

The course is very challenging for people with no background in programming, but it is very useful and I strongly recommend it.

Rubens Morita (PhD student)
